

PERIMETER OF SIMILAR TRIANGLES

1) $\triangle ABC \sim \triangle DEF$

a) Find the missing sides of $\triangle ABC$.

$$\frac{SM}{LG} = \frac{4}{10} = \frac{5}{x} = 4x = 50$$

$$x = 12.5$$

b) What is the scale factor?

$$\frac{SM}{LG} = \frac{4}{10} = \frac{2}{5} = .4$$

c) Find the perimeter of both triangles. Is the scale factor the same?

$$P_{SM} = 4 + 5 + 6 = 15$$

$$P_{LG} = 10 + 12.5 + 15 = 37.5$$

$$\frac{SM}{LG} = \frac{4}{10} = \frac{6}{5}$$

$$4y = 60$$

$$y = 15$$

$$\frac{15}{37.5} = .4$$

Theorem on Ratio of Perimeters

The ratio of perimeters EQUALS the ratio of sides

2) Two triangles are similar. The sides of the smaller triangle have lengths 4, 6, and 8 cm. The perimeter of the larger triangle is 27 cm. Find the length of the shortest side of the larger triangle.

$$\frac{SM}{LG} = \frac{4}{x} = \frac{18}{27}$$

$$18x = 108$$

$$x = 6$$

3) The perimeter of two similar triangles are in the ratio 3 : 8. If the length of the largest side of the first triangle is 6 meters, find the length of the largest side of the second triangle.

$$\frac{SM}{LG} = \frac{3}{8} = \frac{6}{x}$$

$$3x = 48$$

$$x = 16$$
